Smart Labs

AI-Powered Virtual Labs

Problem Statement

Design and develop innovative, scalable, and technology-driven solutions to enhance the OLABs platform, addressing key challenges in virtual education. Focus on improving the accessibility, functionality, and effectiveness of virtual labs while ensuring security, reliability, and data integrity.

Proposed Solution

The proposed solution enhances OLABs with AI-powered virtual labs using LLMs for interactive guidance and AI tutors. It integrates pre-prompting techniques and domain-specific LLMs to provide accurate explanations and AI-generated questions for assessments. Additionally, improvements have been made to the hands-on coding experience, which was previously lacking in OLABs. The solution also includes a sign language translation feature, making the platform more accessible for diverse learners.

**Pretrained
LLMs**

**Cloud
based**

Personalized

**Integration
via APIs**

ENHANCEMENTS

How it enhances O Labs platform

The solution enhances O Labs by integrating AI-powered coding environments and automated feedback, enabling students to write, test, and receive instant feedback on code. It also utilizes LLMs for interactive guidance and AI-generated questions, improving engagement and personalized learning.

ACCESSIBILITY

just 2 lines

```
<script src="script.js"></script>
<script type="module">
  import { CONFIG } from './config.js';
  import { createChat } from 'https://cdn.jsdelivr.net/npm/@n8n/chat/dist/chat.bundle.es.js';
  createChat({
    webhookUrl: CONFIG.WEBHOOK_URL
  });
</script>
```

INNOVATION

Enhancing website using AI agents and LLM
Hands on coding with real time feedback
Sign language translation implemented

ETHICAL STATEMENT

Our enhancements to the O Labs platform prioritize fairness, transparency, and accessibility in AI-driven education. We ensure that AI-generated feedback and assessments remain unbiased, accurate, and supportive of diverse learning needs. User privacy and data security are upheld through responsible data handling and compliance with ethical AI standards. Our goal is to empower students with equitable learning opportunities while maintaining academic integrity.

Conclusions

Hands on coding

Our enhancements enable hands-on coding with real-time AI feedback, fostering interactive learning and improving problem-solving skills in O Labs.

Real time feedback

The system provides instant AI feedback, helping students correct mistakes, deepen understanding, and reinforce learning with adaptive hints and suggestions.

Effective

AI-driven virtual labs adjust difficulty, recommend relevant experiments, and provide intelligent assistance, enhancing engagement and making learning more personalized and effective.
